Acts of nature themselves can seem more than a little supernatural. When Mount St. Helens explodes in 1980, a horrible secret is buried with the ashes that haunts the heroine years later. When Yosemite National Park floods one spring, the main character learns secrets about her family's past from the last century that she would rather not find out. And when a girl from back East moves to St. May, Montana near Glacier, a record snowfall prevents her from escaping when a strange woman dances in the snow, coming after her with every avalanche. Fire and Ice both spell FEAR.
